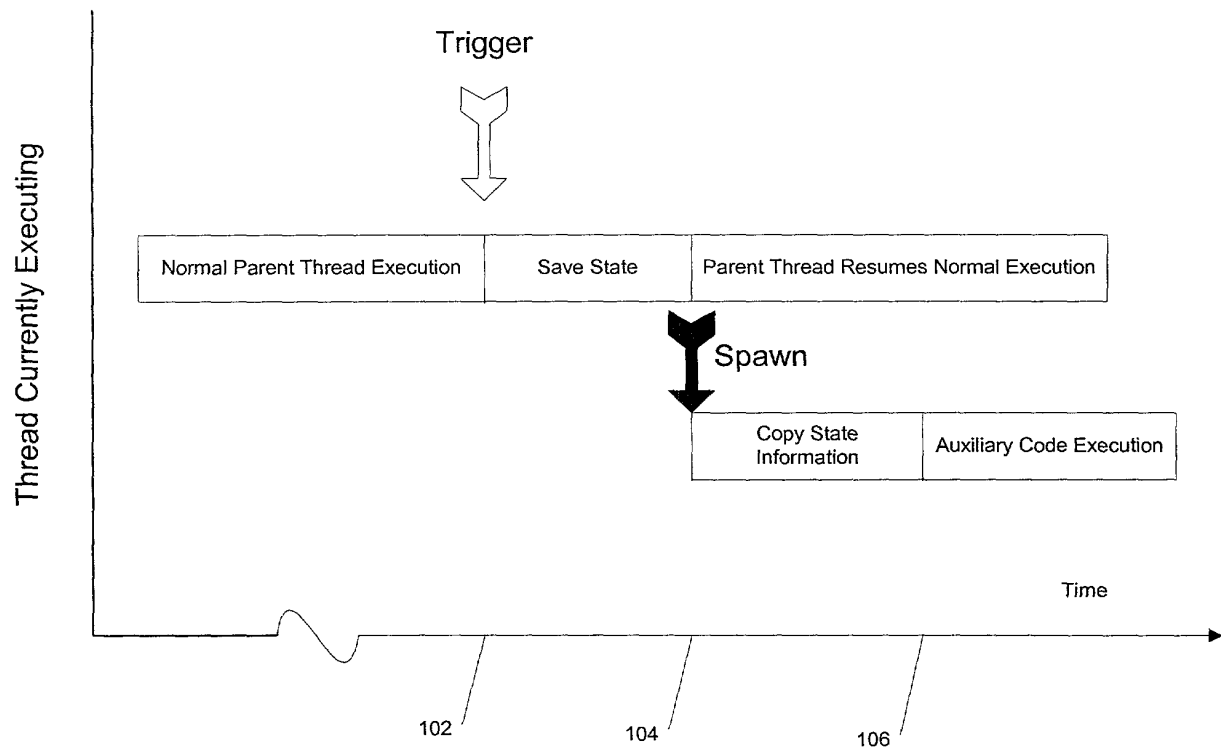

Figure 1

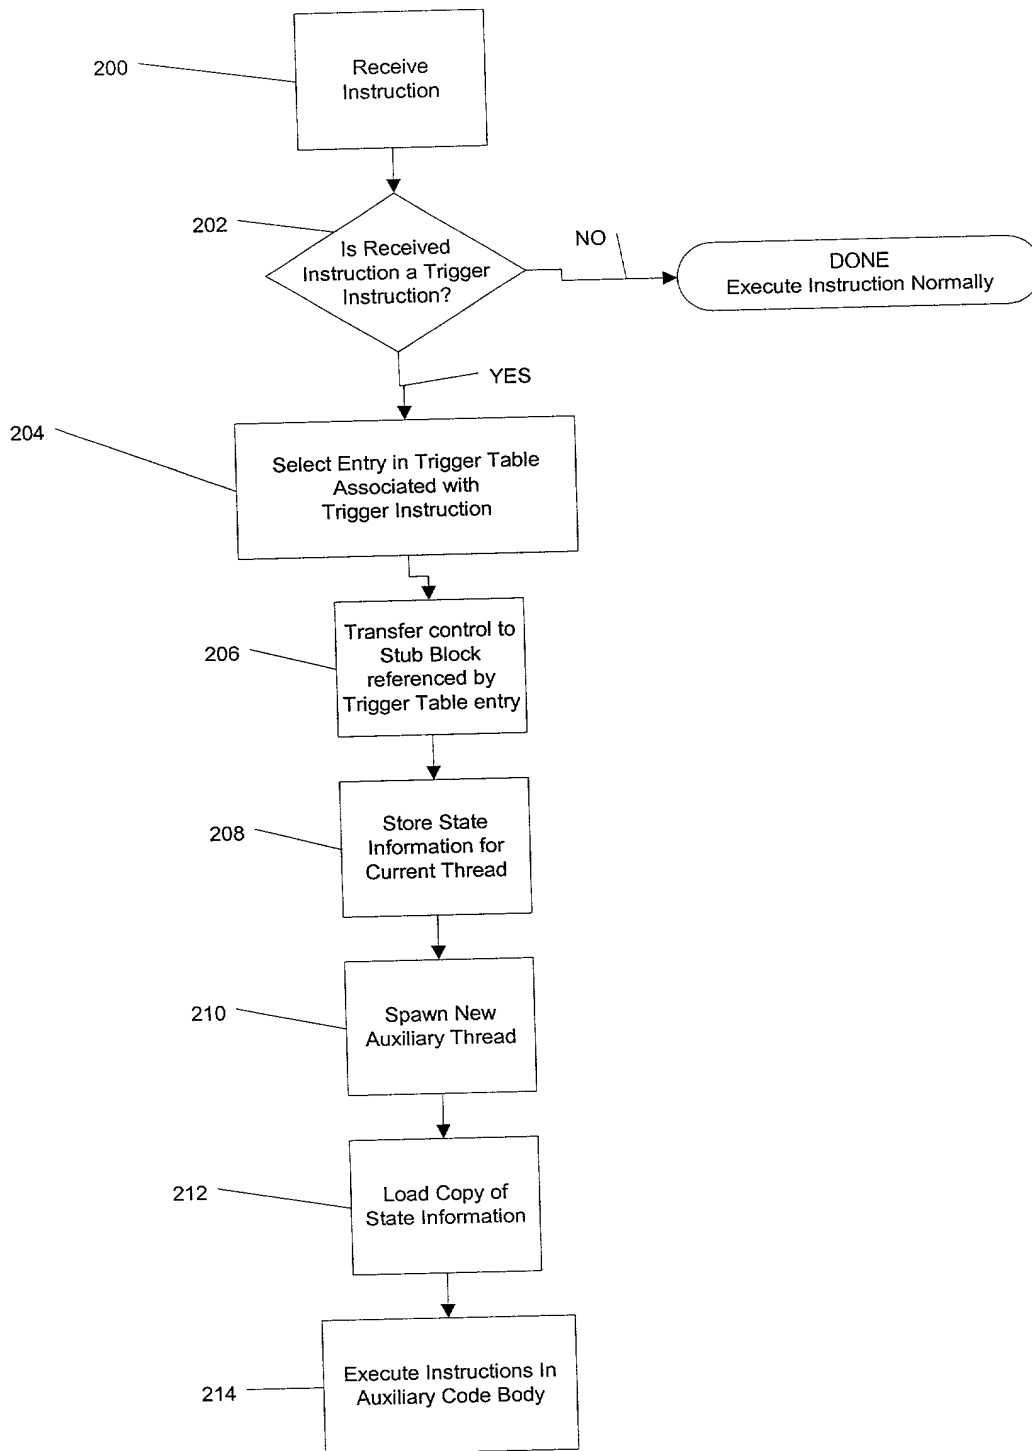

Figure 2

Diagram illustrating a memory layout structure, likely for a program or system, divided into two main sections:

- Code Section 302:** This section contains the executable code. It is further divided into:
  - Function Body 306:** The main body of a function.
  - Auxiliary Code 308:** Code blocks used for auxiliary functions or initialization.
  - Auxiliary Code (P-slice Code) 309:** Code blocks used for auxiliary functions, specifically P-slice code.
- Data Section 304:** This section contains data structures. It includes:
  - Trigger table 310:** A table used for triggering events or actions.

Vertical ellipses (...) indicate that the structure continues beyond the shown blocks.
